

Installation instruction - SF signages with built-in converters

1., Purchased parts package

signage pre-installed on substructure with built-in converters and power connection cable

wiring diagram and assembling aid

2.,

Attention! Signage should only be fixed at the fixing ears. Connection should be made by a certified electrician.

3.,

Do not drill into the substructure! This may cause short circuit in the wiring!

4.,

Power supply connection should be made on the cable provided!
Pay attention to proper power supply voltage (220-240V)!

5.,

Switch on power supply.
